

Stark Industrial 's Quest Environmentally Safe Biological Treatment is a highly active biological treatment that works to maintain grease traps, drain lines, septic systems etc. It is also highly effective for odour control. Quest's live bacteria work quickly to liquefy and digest organic waste.

**DIRECTIONS:**

**GREASE TRAPS:** Use 120ml to 300ml depending on size of grease trap. Maintenance: 120ml daily.  
**NOTE** Clean out grease trap if clogged prior to treatment.

**SEPTIC TANKS:** Add 500ml per 25 cu.ft. capacity initially. Thereafter, 250ml weekly. If clogged add 5-10 litres of Quest directly to help clear clog.

**PORTIBLE TOILETS:** Add 2-5 litres directly. Make sure water is present to aid liquefaction of sludge.  
**R.V.'s/MARINE:** Use 250ml weekly.

**DRAIN LINES AND DOWN PIPES:** Use 100-200ml 2-4 times a week. Always treat the lower floors first allowing at least a day prior to treating subsequent floors. This prevents blockage of lower levels due to release of solids from higher levels.

**DRAIN MAINTENANCE:** For optimum effectiveness, Quest must be regularly injected into the drain system - manually or automatically.

**NOTE:** Quest is not for use in emergency situations. Do not use with very hot or boiling water, bleach, acids, disinfectants. For best results use when flow rates are at their lowest level.

**PROPER DISPOSAL:** Disposal must be in compliance with all Municipal, Provincial or Federal Regulations.
