

Stark Industrial 's Biological Drain Maintainer is a highly active non-acid, non-alkaline enzyme treatment that works immediately to maintain grease traps, drains, sewage treatment plants, etc. Also used for immediate odor control. Biological Drain Maintainer 's live bacteria works quickly to liquefy and digest most organic waste. Non-polluting.

DIRECTIONS: Grease Traps: Use 1/4 to 1/2 litre daily for the first week. Maintenance treatment 1/4 litre every 7 days. **NOTE:** Clean out grease trap if clogged prior to treatment. Treat trap 2 days prior to treating lines.

DISHWASHER: 250ml weekly.

SEPTIC TANKS: Add 500ml per 25 cu. ft. capacity initially. Thereafter, 250ml weekly. If clogged add 5-10 litres Biological Drain Maintainer directly to help clear clog.

PORTABLE TOILETS: Add 2-5 litres directly. Make sure water is present to aid liquefaction of sludge.

R.V./MARINE: Use 250ml weekly.

DRAIN LINES AND DOWN PIPES: Use 100-200ml, 2-4 times a week. Always treat the lower floors first allowing at least a day prior to treating subsequent floors. This prevents blockage of lower levels due to release of solids from higher levels.

SEWAGE TREATMENT: Use 15 to 20 litres for every million gallons of daily flow as initial treatment. Maintenance treatment is 5 litres applied daily. May be reduced to weekly depending upon how well system has stabilized.

FOOD CONTACT SURFACES: Do not use on food contact surfaces.
